I had to realize it's because of the subquery. Can anyone explain me why does this happens? A: It seems like you want to SELECT * FROM (select * from foo) so that all the columns are available to the outer query. However, this subquery is logically a FROM clause, so it doesn't do what you want it to. If your data is not very large,

you can change the subquery to a VIEW, like so: CREATE VIEW myview AS SELECT * FROM (SELECT 'value1' 'value2' FROM dual) ; And then SELECT from myview. If you have a table with a large number of columns that will make the query more readable like this: SELECT col1, col2 FROM mytable; You can SELECT all the columns from the table using an INNER JOIN, like so: SELECT col1, col2 FROM mytable t INNER JOIN (SELECT col1, col2 FROM mytable) a ON t.col1 = a.col1 AND t.col2 = a.col2; Or, if you don't want to repeat the column names: SELECT t.col1, t.col2, a.col1, a.col2 FROM mytable t INNER JOIN (SELECT col1, col2 FROM mytable) a ON t.col1 = a.col1 AND t.col2 = a.col2; Potentiation of pancreatic secretory function in rat by somatostatin: differential effect on chloride and amino acids. The octapeptide somatostatin has been shown to inhibit the stimulatory effect of cholecystokinin on the exocrine pancreas. To further elucidate the antisecretory mechanism of somatostatin, we studied its effect on release of pancreatic amylase and chymotrypsinogen at baseline and after maximal stimulation. Somatostatin (5.8 micrograms/kg) was administered intraduodenally through a gastrostomy tube and release of amylase, chymotrypsinogen and the amylase-chymotrypsinogen complex were determined before and after cholecystokinin-8 (10 U/kg iv). Somatostatin inhibited basal am

Q: Pagination on openlayers I'm using openlayers to display a layer through ajax (openlayers.request.XHR) and I need to paginate the layer. I read that I can use layers.getSource and layers.getBounds to get the layer's bounds and than do my own pagination. Now the problem I'm having is that my layer it's pretty big and I don't know how to make the bounds of the layer. If I do bounds, I get a float with the higher bound of the map. Is there any way to get the lower bound? I'm doing my pagination like this:

```
function paginate(map, bounds, pageNo){ var maxPages =  
    Math.ceil((Math.pow(bounds.getWidth(), 2) *  
    bounds.getHeight())/map.getSize().getWidth()/2); var start =  
    ((pageNo*maxPages)-maxPages+1); for(var i = start;i
```
